

## Curriculum Vitae of Sven Christian Andrä

**Sven Christian Andrä,  
Director**

Sven Christian Andrä, born in 1972, is the founder and director of Andrä AG. Way back in his early youth he became interested in electronics and microprocessors and proceeded to learn various programming and assembler languages which he used mainly to control his home-made robots.

At the age of 15, together with his father, he set up L&S Systemtechnik in order to sell his own services and products. After 'A' levels there followed various stays abroad, including South Africa, France, Russia and the USA, among others. His course of engineering studies at Karlsruhe university also took Sven Christian Andrä to Lausanne and Hamburg-Harburg.

Following twelve years' continuous free-lance work, he founded Andrä AG in 1999 in order, for the first time, to successfully realise his visions within a larger team of staff.

In his private life, he loves travel, preferably driving his Land Rover across the deserts of Africa, cooking or simply exploring Berlin on his 40-year-old Vespa.
